## Parts List

### Parts List

A seldom used, but quite helpful feature of VPCCommand was brought to mind by Chad Beery of North Carolina, this being the **Parts List** function. From within the Tree you can generate a Parts List Report, which will show you a very detailed list all the parts, and pieces that have been designed, detailed, and priced.

You may also run the **Parts List Report from the Toolbar** to generate a report for only the wall or roof you have selected in the Tree. Creating this Report may be helpful, for example, to show you the trim items that have been generated. *This may save you some surprises later on...*

- I wish to see what parts I will receive on Wall 4. *Note that a VPC-Run should be completed and Saved in order to show the final parts.*
- **Click on Wall 4** in the Tree. This can be wall 4 from any category. I happen to be at the Covering folder, but Trim, Secondary, etc. is fine.
- **Click on the Parts List** icon from the toolbar.
- The Parts List report will generate and list ALL parts associated with Wall 4. In my example, this would include Frames as this was my Along wall for locating frames.
